         The present sequence represents the C. elegans (nematode) dopamine transporter CobMT2. CobMT1 is a shortened version of CobMT2. The present invention also describes: (1) an expression vector comprising a DNA sequence operably linked to a control sequence which is compatible with a suitable host cell; (2) an expression system comprising a DNA to the comprising and the sequence which is compatible with a suitable host cell; (2) an expression system comprising a host cell transformed with the expression vector of (1); (3) a method of producing purified dopamine receptor; (4) an antibody to a dopamine receptor; (5) a DNA probe comprising a nucleic acid as defined above. The expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    purified dopamine receptor; (4) an antibody to a dopamine receptor. (5) a DNA probe comprising a nucleic acid as defined above. The expression system is used in a screening assay for dopamine transporter antagonists or stimulators. These can be used as antiparasitic or psychoactive drugs, specially antibulation of other dopamine transporter genes in an organism. The probe may be used for determine the presence of other dopamine transporter genes in an organism. The probe may be used for detecting genes encoding dopamine
                                                                                                                                                                                                                                                                                                                         (AMCY )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              invention also describes: (1) an expression vector comprising a DNA sequence operably linked to a control sequence which is compatible with a sultable host cell; (2) an expression system comprising a host cell transformed with the expression vector of (1); (3) a method of producing

Claim 11; Page 387; 422pp; English.

Nucloic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating disorders such as Parkinson's and Alzheimer's diseases, cancers and infections .

WPI; 2000-602220/57.

acids, proteins, antibodies and (antiagonists are useful in the diagnosis treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastroinestinal tact, liver, lung or urogenital; (b) immune disorders e.g. addison's disease, allergies, autoimmune haemolytic anaemia, uvioimmune thyroiditis, diabetes mentitus combined of the second of the second arthritis and ulcorative croh's disease, multiple selecosis, theumatoid arthritis and ulcorative

colitis; (c) cardiovascular disorders such as myocardial ischaemias;

healing; (e) neurological diseases e.g. cerebral anoxia and (f) infectious diseases such as viral, bacterial, for

and

(d) wound

human secreted proteins encoded by the genes AAC59679-C59728. The genes and proteins are useful for preventing, amelicating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic

Sequences AAB38971-B39020 represent the amino acid sequences of 50

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            or stimulators. These can be used as antiparasitic or psychoactive drugs, especially antihelminthic drugs. The nucleic acid can be used to determine the presence of other dopamine transporter genes in an organism. The probe may be used for detecting genes encoding dopamine

           in vaccination, The nucleic actid (I) may be used to produce the Septembers (Pi) value production of vectors containing them which are used to produce hosts calls which express the polypoptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antitodies against the bacteria. The polypoptides may also be used to assay for other inabilitors of their activity and therefore identify companies that may be activity and therefore identify companies and the for the vaccinate subjects and the foreign identify companies and activity and therefore identify companies and confidence of the vaccination of vaccination of the vaccinatio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, reheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, heamatopoletic disorders, anaemia, platelet disorders, transmouropopania, wounds, burns, ulcers, osteoporosis, severe combined immunodeficiency, eczema, allergic chintitis, asthma, diabetes, cancer, multiple scleonsis, depression, althelmer's disease, Parkinson's disease, neurodegenerative and

alphaZdelta-2, alphaZdelta-3 or alphaZdelta-4 sibhnit solible proteins which retain their affinity for radioactively labelled gabapentin, the alphaZdelta subunit is 1 of the components of the heteroamitimeric voltage-dependent calcium channel (VCC) complexes present in neuronal and non-neuronal tissues including heart and skeletal massler. Numerous soluble forms of the human calcium channel alphaZdelta subunits (AMU01014-AMU01024 and AMU01012-AMU01039) and 5 soluble-knows of the portine calcium channel alphaZdelta subunits (AMU01014-AMU01034 and AMU01014-AMU01034 and AMU01014-AMU01031) and 5 solubla-knows of the portine calcium channel alphaZdelta subunits (AMU01031-AMU01031) and 5 solubla-knows of the secreted soluble alphaZdelta subunit may be used in assays e.g. solublitation proximity assay (SRA), flashplate, miskel flashplate, filter binding or wheat germ lectin flashplate assays to detect or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AMB55098 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention.

N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to 550 ID No:4454 so even though sequences are present for SEQ ID No:455 to 46472, no sequences are present for SEQ ID No:455 to 46472.
                                                                                                                                                                                                                The present sequence represents human secreted calcium channel alpha2delta subunit #7 which is soluble and retains the functional characteristics of the full length or wild type alpha2delta subunit (AAU01025) from which it is derived. The invention relates to truncated
                                                                                                                                                                                                                                                                                                                                               Calaium channel alphaZdelta subunits, useful in e.g. Flashplate assays, filter Wheat Germ Lectin Flashplate assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    alpha2dolta-3; alpha2dolta-4; voltage-dependent calcium channel; VDCC; gabapentin; scintilation proximity assay; SR, nickol flashplate assay; filter binding assay; wheat germ lectin flashplate assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             04-JUL-2001

                                                                                       measuring the level of binding of the labelled compound to alphadelta-1 subunit. The method is useful for screening ligands, preferably biologically active products that modulate a nervous system function, which bind a carebral cortical voltage-depandent calcium channel alphadelta-1 subunit. The ligands identified by the method are useful for treating disorders of the nervous system, including path, epilepsy and anxiety. The present sequence represents a human calcium channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Competitive binding assay for screening ligands which bind a cereby cortical voltage-dependent calculum channel alpha2-delta-1 subunit, where the ligands identified are useful for treating disorders of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  L-Valine, Spermine and/or L-Phenylalanine) of a calcium channel alpha2delta subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   measure the binding or interaction of a ligand (e.g. gabapentin, L-Norleucine, L-Allo-Isoleucine, L-methionine, L-Leucine, L-Isoleucine,
                                                                                                                                                                                                                                                                                                                              preferably alpha2delta-1 subunit. The method comprises contacting a secreted soluble recombinant alpha2delta-1 subunit with a ligand of interest and a labelled compound which binds the subunit, followed by
                                                                alpha2delta subunit related
                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a new method for screening ligands which bind cerebral cortical voltage-dependent calcium channel alpha2delta subunit,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 84; 158pp; English.

                                                                                                                                                                                                                                                                 cc alpha2delta subunit #8 which is soluble and retains the functional contaracteristics of the full length or wild type alpha2delta subunit (AMD01025) from which it is derived. The invention relates to truncated alpha2delta 2, alpha2delta is or alpha2delta is subunit soluble proteins which retain their affinity for radioactively libelied gabapenin. The cc alpha2delta subunit is 10 of the components of the heteromaltimeric voltage dependent calcium channel (VDC) complexes present in neuronal alpha2delta subunit sales including heart and skeletal muscle. Numerous soluble forms of the human calcium channel alpha2delta subunit mercous caluble forms of the human calcium channel alpha2delta subunit forms of the components of the soluble alpha2delta subunit soluble forms of the component is calcium channel alpha2delta subunit processor (AAMD0101*AAMD01024 and AAMD0102*AAMD01031) are concluded acclaim channel alpha2delta subunit may be used in assays concluded acclaims channel alpha2delta subunit soluble alpha2delta subunit solubl

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          secreted soluble recombinant alphaddelta Isubunit with a ligado of interest and a labelled compound which binds the subunit, followed by measuring the level of binding of the labelled compound to alphaddelta isubunit. The method is useful for screening ligands, preferably biologically active products that modulates a nervous system function, which bind a cerebral cortical voltage-dependent calcium channel alphaddelta-1 subunit. The ligands identified by the method are useful for treating disorders of the nervous system, including pain, cpliepsy and anxiety. The present sequence represents a human calcium channel alphaddelta subunit related sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              competitive binding assay for screening lighted which bind a cerebral cortical voltage-dependent calcium channel alpha?-debita-1 subunit, where the lighted identified are useful for treating disorders of the

Numerous soluble forms of the human calcium channel alpha2delta subunits (ABUD1014 ABUD10124 and ABUD1013 and 5 Soluble forms of the porcine calcium channel alpha2delta subunits (ABUD1017) and 5 soluble forms of the described. The secreted soluble alpha2delta subunits (ABUD107) ABUD1013) are described. The secreted soluble alpha2delta subunit may be used in assays c.g. scintilation proximity assay (SPA), flashplate, nickel flashplate, filter binding or wheat germ lectin (Inshphate assays to detect or measure the binding or interaction of a ligand (e.g. gubapentin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents human secreted calcium channel alpha2delta subunit *9 which is soluble and retains the functional characteristics of the full length or wild type alpha2delta subunit (AAU01025) from which it is derived. The invention relates to truncated alpha2delta*2, alpha2delta*3 or alpha2delta*4 subunit soluble proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Calcium channel alpha2delta subunits, useful in e.g. SPA assays,
Flashplate assays, Nickel Flashplate assays, Filter binding assays or
Wheat Germ Lectin Flashplate assays .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             alpha2delta-3; alpha2delta-4; voltage-dependent calcium channel; VDCC;
gabapentin; scintillation proximity assay; SPA; nickel flashplate assay;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    which retain their affinity for radioactively labelled gabapentin. The alpha2delta subunit is 1 of the components of the heteromultimeric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Page 86-87; 160pp; English.
